```
Welcome to the data analyzer and transformer program.

MAIN MENU.
1.Enter data.
2.Display Data Summary
3.Calculate factorial(Recurtion)
4.Filtered data by threshold(Lambda Function)
5.Sort data
6.Return dataset statistics
7.Exit

enter your choice: 1
This function is used for enter data from the user.
It will store the data in the form of list dataset.
enter 1 for 1d list or 2 for 2d list : 2
enter number of rows: 4
enter number of columns: 2
enter element 1,1: 10
enter element 1,2: 14
enter element 2,1: 43
enter element 2,2: 25
enter element 3,1: 65
enter element 3,2: 32
enter element 4,1: 12
enter element 4,2: 76
Your data : [[10, 14], [43, 25], [65, 32], [12, 76]]

Your data entered successfully.

MAIN MENU.
1.Enter data.
2.Display Data Summary
3.Calculate factorial(Recurtion)
4.Filtered data by threshold(Lambda Function)
5.Sort data
6.Return dataset statistics
7.Exit

enter your choice: 2
This function is used for various statistical calculations.
ex.,Total number of elements , sum of all elements ,
minimum and maximum number of the list, average number of the list.
Total elements are: 4
sum: 277
minimum number: 10
maximum number: 76
average of all numbers: 69.25

MAIN MENU.
1.Enter data.
2.Display Data Summary
3.Calculate factorial(Recurtion)
4.Filtered data by threshold(Lambda Function)
5.Sort data
6.Return dataset statistics
7.Exit

enter your choice: 3
This function is used to find factorisation of any number.
Enter number for foctorisation: 10
factorial of 10 is : 3628800

MAIN MENU.
1.Enter data.
2.Display Data Summary
3.Calculate factorial(Recurtion)
4.Filtered data by threshold(Lambda Function)
5.Sort data
6.Return dataset statistics
7.Exit

enter your choice: 4
```

```
This function is used to filter our data.
User has to enter 'threshold value' for filtering data.
Enter threshold value:  50
Filtered Data: [65, 76]

MAIN MENU.
1.Enter data.
2.Display Data Summary
3.Calculate factorial(Recurtion)
4.Filtered data by threshold(Lambda Function)
5.Sort data
6.Return dataset statistics
7.Exit

enter your choice: 5
This function is used to set the data in ascending or descending order.
Sorting each row:
[10, 14]
[25, 43]
[32, 65]
[12, 76]

MAIN MENU.
1.Enter data.
2.Display Data Summary
3.Calculate factorial(Recurtion)
4.Filtered data by threshold(Lambda Function)
5.Sort data
6.Return dataset statistics
7.Exit

enter your choice: 6
This function is used to return multiple values of the data.
ex.,minimum and maximum value,average value.
Min: 10
Max: 76
Average: 34.625

MAIN MENU.
1.Enter data.
2.Display Data Summary
3.Calculate factorial(Recurtion)
4.Filtered data by threshold(Lambda Function)
5.Sort data
6.Return dataset statistics
7.Exit

enter your choice: 7
Thank you for using this transformer program.
Have a good day.
```
